

# Seth Conner

Provo, UT    sethconnergmail.com    github.com/sethcsanti    www.linkedin.com/in/seth-conner-ba580b2a9

## Profile Summary:

*Systems-focused Software Engineer specializing in high-performance applications using Python, C++, and C, with a strong foundation in low-level architecture and algorithmic optimization.*

## Skills

- **Languages:** Python, C++, C#, Java, Go, Typescript
- **Systems & Low-Level:** Memory Management, Pointers, Processor Architecture, Concurrency, Performance Optimization
- **Algorithms & Data Structures:** Graphs, Trees, Dynamic Programming, Big-O Analysis
- **Backend & Systems:** REST APIs, Distributed Systems, SQL/MySQL
- **Tools & Infrastructure:** Docker, Kubernetes, Git
- **AI / Data:** Machine Learning Fundamentals, Data Preprocessing, Model Evaluation

## Education:

**Bachelor of Science in Computer Science:  
Software Engineering (2024-2028) (3.74 GPA)**

*Brigham Young University, Provo UT*

Relevant Coursework:

- CS235 – Data Structures and Algorithms, CS 236 – Discrete Structures, CS 224 – Introduction to Computer Systems, CS 240 – Advanced Software Construction, CS 260 – Web Programming, CS 312 – Algorithm Design and Analysis, CS 452 – Database Modeling Concepts, CS 270 – Introduction to Machine Learning, STAT 220 – Statistical Modeling for Data Science, MATH 112 – Calculus 1, MATH 215 – Computational Linear Algebra, CS 340 Software Design, CS 312 Algorithm Design and Analysis, CS 270 Intro to Machine Learning

## Projects:

- Built a full-stack web platform with real-time features and scalable architecture using C# and TypeScript
- Designed a sensor-based plant watering system with automated control logic and hardware integration
- Developed an attendance tracking tool to digitize and simplify classroom record management
- Configured a Raspberry Pi media server for centralized streaming and network-based content access

## Experience :

### Full Stack Web Developer (Jan 2026 - Current)

*BYU Office of Information Technology, Provo UT*

- Develop and maintain internal applications in Mendix while migrating systems to Go and HTMX architectures
- Use AI-assisted tools to accelerate development, refactoring, and migration workflows
- Develop full-stack apps with C# and TypeScript (Bun, Next.js) on server infrastructure.
- Build and operate APIs, data layers, and web interfaces with a focus on performance and scalability.

### Teacher's Assistant (Aug 2025 - Jan 2026)

*BYU, CS 110, Provo UT*

- Led lab sections to facilitate student learning of core programming concepts.
- Provided individualized tutoring, addressing coding challenges and reinforcing foundational skills.
- Collaborated on side projects supporting curriculum development and educational resources, using mainly Jinja, XML, Markdown, and Canvas tools.

### Data Analyst Intern (Feb 2024 - Feb 2025)

*FamilySearch, Salt Lake City*

- Primarily utilizing Excel and other software tools for data extraction and cleaning.
- Responsible for front end work uploading images to be indexed on FamilySearch.
- Collaborating with international organizations to facilitate data operations across different regions.
- Conducting data analysis on records to maintain accuracy and optimize indexing processes.
